Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3, 6, 7 and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Davis U.S. Patent 4,803,951 in view of Rossignol U.S. Patent 5,277,148.

Davis teaches an enclosure for pets which is structurally similar to the Applicant's claimed collapsible animal container. Davis teaches a flexible material housing 10 having a top wall, a bottom wall, a pair of end walls, and a pair of sidewalls. See Figures 1-3. A pair of support members in the housing, with each support member positioned adjacent an opposing wall of the housing. Each support member includes a peripheral shape substantially corresponding to the opposing walls of the housing (24, 26, 28, 30, 32, 34, 36 and 38). Elements 33 and/or 35 are considered to be struts secured between the support members to maintain the opposing support members in a separated positioned and to support the housing. However, Davis does not teach a trapezoidally shaped animal container. Rossignol teaches an animal cage having a trapezoid shaped exterior. Regarding claim 1, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the shape of Davis with a trapezoid shaped exterior, in view of the teachings of Rossignol, in that the

shape allows for placement in limited sized storage areas. Regarding claims 2 and 8-11, when in the erected positioned and in combination with the outer covering, the support member of Davis teaches a rigid panel. As for claim 3, each support member of Davis includes a series of members which form a peripheral frame. As for claims 6 and 7, mesh 60 is considered to be at least one window in at least one of the sidewalls and the end walls.

Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Davis in view of Rossignol U.S. Patent 5,277,148 as applied to claim 1, and further in view of Chou U.S. Patent 6,6715,446. The combination of Davis as modified by Rossignol do not teach the use of a mesh door in the enclosure. However, Chou teaches an animal enclosure having a mesh door. Regarding the claims, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the combination of Davis as modified by Rossignol with a mesh door, in view of the teachings of Chou, in order to restrict the animal from leaving the enclosure yet giving the animal the ability to look out of the enclosure.

Claims 13, 14 and 17-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Davis U.S. Patent in view of Rossignol U.S. Patent 5,277,148 as applied to in claim 1, and further in view of Liang U.S. Patent 5,702,010.

Davis as modified by Rossigol do not teach a collapsible strut member. However, Liang teaches a collapsible strut member having end caps which are threadedly attached to the ends of the strut member or rod. Regarding the claims, it would have been obvious to a person of ordinary skill in the art at the time the invention

Art Unit: 3643

was made to modify strut member of Davis with a telescopic strut member, in view of the teachings of Liang, in order access in the collapsing and storage of the animal enclosure. As for claim 21, the use of a peelable adhesive in connecting the polyvinylchloride members is well known and thus deemed to be obvious to a person ordinary skill in the art at the time the invention was made in order to secure the individual elements together.

Response to Amendment

The combination of Davis as taught by Rossignol teach a trapezoid shaped animal enclosure for placement into areas of limited size.

Conclusion

Summary: Claims 1-3, 5-7, 13, 14 and 17-21 are rejected.
